Kaustubh Wagh

kaustubhwagh001@gmail.com | +91 7350994014 | linkedin.com/in/kaustubh-wagh-2a7302220

Skills

- **Programming & Scripting:** Python, Golang, Node.js, Bash, PromQL, LogQL, TraceQL
- **DevOps & Platform:** Kubernetes, GKE, AKS, Helm, Docker, Terraform, Ansible, Azure DevOps, Argo CD
- **Cloud Platforms:** Google Cloud Platform (GCP), Microsoft Azure, AWS
- **Observability & Monitoring:** Grafana, Prometheus, Mimir, Loki, Tempo, Elasticsearch, Kibana, OpenTelemetry, APM, Profiling, ClickHouse, Datadog, Incident.io
- **Databases & Data Streaming:** MongoDB, PostgreSQL, MySQL, Cassandra, Redis, Kafka

Experience

Site Reliability Engineer, Optym – Pune, India — Apr 2026 – Present

- Supported production reliability across multiple business units through incident triage, alert analysis, application health monitoring, production operations, and structured shift handoffs for US-facing workloads.
- Standardized production alerting practices by identifying gaps in existing alerts and defining reusable alerting patterns to improve consistency and operational visibility across services.
- Created incident documentation, SOPs, and runbooks covering troubleshooting, escalation paths, service context, and operational procedures; standardized incident records using incident.io to improve knowledge transfer and onboarding.
- Prototyped a RAG-based SRE assistant to correlate historical incidents, runbooks, architecture documentation, alerts, and deployment context, enabling AI-assisted incident investigation and remediation suggestions aimed at reducing MTTR.

DevOps Engineer / Site Reliability Engineer, Jio Platforms Limited – Mumbai, India — Oct 2023 – Mar 2026

- Designed and operated observability platforms across 100+ projects using Grafana, Prometheus/Mimir, Loki, Tempo, Elasticsearch/Kibana, APM, Profiling, and OpenTelemetry for metrics, logs, traces, and performance analysis.
- Automated infrastructure provisioning and configuration using Terraform and Ansible, reducing manual effort, configuration errors, and infrastructure management costs by 30%.
- Engineered Kubernetes/GKE infrastructure and networking, implementing Helm-based deployments, Istio, NGINX Ingress, egress gateways, API gateways, and CNI/CRI configurations for scalable production workloads.
- Built CI/CD pipelines using Google Cloud Build and Azure DevOps with SonarQube and Black Duck integration for automated delivery, code quality, and security scanning.
- Architected real-time telemetry and data pipelines using open-source and managed cloud services for analytics and AI-driven workloads, while implementing high-availability and multi-region disaster-recovery strategies.

Education

Savitribai Phule Pune University — Aug 2020 – Jun 2023

- B.E. in Information Technology; GPA: 8.91/10

Amrutvahini Polytechnic — Aug 2017 – Jun 2020

- Diploma in Computer Science Engineering; Percentage: 85.14%

Projects

- **AIOps & Intelligent Automation:** Developed an AIOps-oriented approach for anomaly detection, capacity management, and root cause analysis by correlating metrics, logs, and traces using AI/ML techniques to support proactive incident response.
- **OpenTelemetry-Based Observability Platform:** Designed and implemented an end-to-end observability platform using OpenTelemetry, Grafana, Mimir, Loki, Tempo, ClickHouse, and Kubernetes. Built reusable Helm charts, standardized telemetry pipelines, automated collector deployments, and established metrics, logs, and traces ingestion patterns for consistent observability across production workloads.

Certifications

Google Cloud Certified Professional Cloud Architect
